Using blockchain technology for faster contracts creation and invoicing

The challenge

Develop a smart contract solution based on blockchain technology to deploy contractual terms dynamically and to streamline the invoice reconciliation process

What are we looking for?
Blockchain solution for deploying our contracts

What are we NOT looking for?
If blockchain is not the solution, suggest the right one

Technology Specification
Open to any tech

Evaluation Criteria
The solutions will be evaluated according to the following criteria:
- Robustness of the model and its technical viability
- Completeness in addressing contractual terms

Deliverables

A blockchain solution to deploy without any gaps, upstream contractual terms
